Here are the questions from [2.3 Basic SQL (Single-Relation Queries) - Quiz]

- 1. Write SQL queries that determine
- (1) What types of accounts does J. Smith have?
- (2) What are the account numbers of savings accounts with less than \$1000 Optional Answers:
- 2. Temporary (temp) Tables let you store and process intermediate results. You can query and update temp tables the same way you do with the regular tables. The temporary tables could be very useful for storing temporary data.

 Optional Answers:
- 3. WHERE name LIKE '_A_B_C' Describe the above pattern

Optional Answers:

- 1. Find all the names that have six characters in which the second letter is "A", the fourth is "B", and the Sixth is "C"
- 2. Find all the names that contains "A", and "B" AND ends with "C"
- 3. Find all the names in which the second letter is "A", the fourth is "B", and the Sixth is "C"
- 4. You can order by two attributes in a descending order as follows: "ORDER BY Balance DESC, Age DESC".

Optional Answers:

Thank You
